

## Will there be any impact by removing or modifying the permissions on c\$ share?

[https://kb.netapp.com/Cloud/ncds/nds/cvo/cvo\\_kbs/Will\\_there\\_be\\_any\\_impact\\_by\\_removing\\_or\\_modif...](https://kb.netapp.com/Cloud/ncds/nds/cvo/cvo_kbs/Will_there_be_any_impact_by_removing_or_modif...)

Updated: Sun, 05 Apr 2026 12:34:16 GMT

### Applies to

- ONTAP 9 and later
- CVO
- CIFS

### Answer

Yes, removing permissions on c\$ share can cause access issues to users with administrative privileges

#### **Note :**

- The c\$ share is an administrative share that the cluster or SVM administrator can use to access and manage the SVM root volume.
- While it is technically possible to remove or modify permissions for this share, it is generally not recommended as it can affect system functionality and remote management capabilities.
