

NFSv4.1 Latency During Cluster Reboot on CVO

https://kb.netapp.com/Cloud/ncds/nds/cvo/cvo_kbs/NFSv4.1_Latency_During_Cluster_Reboot_on_CVO

Updated: Sun, 05 Apr 2026 10:20:20 GMT

Applies to

- Cloud Volumes ONTAP (CVO)
- NFSv4.1 protocol environments

Issue

CVO planned cluster reboots with **NFSv4.1** clients experience latency or timeouts (up to 2 minutes in rare cases, but typically around 45 seconds). This is observed as increased delay in protocol takeover and LIF movement, impacting business workloads such as SAP.
