

What is the cause of BlueXP Copy Sync not deleting the objects on source?

https://kb.netapp.com/Cloud/ncds/nds/cs/cs_kbs/What_is_the_cause_of_BlueXP_Copy_Sync_not_del...

Updated: Sat, 04 Apr 2026 23:43:36 GMT

Applies to

- BlueXP
- Copy & Sync

Answer

The `local.json` is not including the `"delete-on-source": true`.

Below is an example of the configuration file and the setting enabled:

```
[root@                ]# more local.json
{
  "workers": {
    "scanner": {
      "concurrency": 25,
      "processes-limit": 4,
      "heap-limit": "4096MB"
    },
    "transferrer": {
      "concurrency": 25,
      "processes-limit": 4,
      "delete-on-source": true
    }
  }
}
[root@                config]#
```

And the default location is: **/opt/netapp/databroker/config**
